Mod. CI01-5

Clonit srl as a company pioneer in the field of biotechnology, would like to make available the quanty West Nile Virus . This is an innovative product for the detection and quantification of West Nile Virus in patients potentially exposed to infection. quanty WNV allows the extraction, reverse transcription and amplification of viral RNA, all in a single step, using Real Time PCR. Results can be available in about 2 hours. The method, certified CE-IVD, ensures a great degree of sensitivity, in addition to a high level of specificity. During the reaction it is possible to identify the positive WNV patients and discriminate they from the positive samples for Usutu Virus.
